

API

Get chatbots

The Get Chatbots API endpoint allows you to retrieve a list of all chatbots associated with your API key.

Endpoint

```
GET https://www.chatbase.co/api/v1/get-chatbots
```

Request Headers

The API request must include the following headers:

Authorization: Bearer <Your-Secret-Key> - The secret key for authenticating the API request.

Accept: application/json - The accepted response content type.

Example Request

```
import requests

url = "https://www.chatbase.co/api/v1/get-chatbots"

headers = {"accept": "application/json"}
```

```
GET /api/v1/get-chatbots HTTP/1.1
```

```
Accept: application/json
```

```
Host: www.chatbase.co
```

```
const options = {method: 'GET', headers: {accept: 'application/json'}}
```

```
fetch('https://www.chatbase.co/api/v1/get-chatbots', options)
  .then((response) => response.json())
  .then((response) => console.log(response))
  .catch((err) => console.error(err))
```

```
curl --request GET \
  --url https://www.chatbase.co/api/v1/get-chatbots \
  --header 'accept: application/json'
```

Response

200: Returns an array `chatbots[]` containing each chatbot's parameters.

401: If the request is unauthorized.

500: If there is an internal server error.

The Get Chatbots API endpoint provides a way to retrieve a list of all chatbots associated with your API key. Each entry in the response array contains all parameters of the respective chatbot.
